The Green Building syndrom

How to achieve what seems to be more complicated than you thought

Geschreven door: **Jacco van Delden**

LEED is transforming the way we think about how buildings and communities are designed, constructed, maintained and operated across the globe. LEED certified buildings save money and resources and have a positive impact on the health of occupants, while promoting renewable, clean energy.

The term “going green” is gaining favor with a growing number of companies. Look no further than “green” certification plaques displayed outside buildings, or the litany of products on store shelves labeled organic. For those concerned with keeping up appearances, going green has never been easier.

But saying you believe in LEED is something different than working according to LEED standards.

Orange Climate is helping companies achieving what they want most. Being more sustainable than before.
